EDUCATION

University of Illinois Urbana-Champaign

GPA: 3.72/4.0

Master of Computer Science

May 2026

Coursework: User-Centered ML | Adv. Information Retrieval | Text Information Systems | Distributed Systems | Database Systems | AI Agents

Extracurriculars: AI Alignment @ Illinois [Founding Vice President; Fellowship Co-Director] | Illini Blockchain [VP Partnerships; Project Lead]

Bachelor of Science in Computer Science + Economics, Minor in Statistics

May 2025

Coursework: Computer Systems | Artificial Intelligence | Compilers | Data Structures | Linear Algebra | Game Design | Financial Econometrics

National University of Singapore [Study Abroad]

Aug 2024 – Dec 2024

Coursework: Game Theory | Urban Economics | Algorithms

Extracurriculars: NUS Fintech Society

SKILLS

Languages: Python, Go, Java, Bash, Git, Rust, C#, C/C++, SQL, Solidity, PHP, HTML/CSS, JavaScript, TypeScript	Frameworks: React.js, Next.js, Tailwind, Svelte.js, Node.js, Express.js, NumPy, Pytest, Pandas, Flask, FastAPI, REST APIs, React Native, WebRTC, WebSockets, MCP	Database/Cloud: Supabase, Firebase, MongoDB, MySQL, PostgreSQL, Milvus, Neo4j, AWS, Azure, GCP	Tools: Ubuntu/Linux, Unity, Unreal Engine, Docker, Jupyter, AI Agents, LangChain, Pydantic AI, Sk-Learn, PyTorch, Spark, Databricks
--	---	---	--

EXPERIENCE

PwC

June 2026 – Aug 2026

AI Engineering Intern

Chicago, IL

- Built and automated RAG pipeline on Databricks that incrementally embeds internal data, powering AI assistants inside proprietary software.
- Made RAG pipeline fully config-driven, reusable, and in-tenant, allowing employees/teams to use framework to ingest newer volumes of data.
- Replaced a paid 3rd-party parser with a native Databricks AI parser + 8-stage data filtering layer, to improve embedding and answer quality.
- Created *benchmarking framework* using *LLM-as-a-judge* to evaluate chunk retrieval and answer quality of RAG model on 100+ sample queries.

University of Illinois Urbana-Champaign – MechSE | [*Website](#) | [*Source](#)

March 2026 – May 2026

Graduate Research Assistant - Prof. Alawini

Champaign, IL

- Built SIIP, an **AI-powered** system deployed on **AWS** that allows academics to *identify cross-disciplinary connections* across collegiate courses
- Used **TF-IDF + JS divergence** to score and rank topic pairings and cache similarity scores in **Supabase** across 35 courses and 1,669 topics.
- Architected an async **FastAPI** ingestion pipeline where every upload triggers LLM-based course topic extraction and enrichment, generates **SciNCL** embeddings in **pgvector**, and updates knowledge graph in **Neo4j Aura** with recomputed similarities, clusters, and PageRank scores.

Mercor

Feb 2025 – May 2025 | Nov 2025 – Feb 2026

Model Analyst & Coding Expert

Remote

- Evaluated side-by-side AI code outputs, writing detailed breakdowns of why one model's logic and reasoning outperformed the other.
- Analyzed 120+ AI-generated hiring evaluations to detect reasoning errors and bias, improving model reliability in automated screening.

IDX Exchange | [*Source](#)

Oct 2025 – Nov 2025

Software Developer Intern

Remote

- Led 5-member team to build a full stack **microservice** integrating CRMLS data and architecting **SQL schemas** for efficient property querying.
- Used **React/TypeScript**, and **PHP**, alongside **MySQL** database and **REST APIs** for scalable data retrieval and user-friendly property search.

CollegeDAO | [*Source](#)

Oct 2024 – Sept 2025

Core Team & Software Developer

Remote

- Created MVP for *Latent*, an AI-powered collaborative hiring platform that connects candidates and recruiters to accelerate talent acquisition.

PROJECTS

ShotBook | [*Source](#)

[Inference-Time Compute Hackathon]

June 2026

- Created AI-powered book-to-video platform that tracks evolving story lore to allow users to highlight text and generate scenes realtime.
- Used **React**, **FastAPI/Pydantic**, **PostgreSQL**, **vLLM**, and **Wan 2.2** to build a baseline-then-delta state machine enforcing continuity.

MyCalPal | [*Website](#) | [*Source](#)

Sept 2025

- Developed **AI agent calendar pipeline** that allows users to easily schedule calendar events by uploading screenshots/files to a *Discord bot*.
- Built dashboard with **Next.js**, **Tailwind CSS**, **MongoDB**, **Gemini SDK**, **Discord SDK** and **GCP** to parse images, and to edit or publish events.

NodeFlow | [*Website](#) | [*Source](#)

[Early open-source contribution to [mcp-b.ai](#) - a feature bringing MCP to browser]

July 2025

- Designed **AI-powered mapping platform** that allows *voice/chat* interaction with LLMs powered by *customizable, browser-native MCP* servers.
- Used **ReactFlow**, **TypeScript** and **Tailwind CSS** for UI, **Gemini** and **WebSockets/WebRTC** for LLM interaction, and **MCP-B** for LLM tooling

StakeShack | [*Source](#)

[Won \$1500 for OnionDAO Solana hackathon at Chicago]

June 2025

- Built **trustless renting/leasing platform** that features verification via crypto-staking, referral rewards, and *AI-powered recommending* systems.
- Used **Next.js/TypeScript** for UI, **Supabase/PostgreSQL** for data governance, and **Gill/Anchor/Rust** for blockchain architecture.
